Interview Questions

Speed up your slow website

⚡ like and share

First

Diagnose the site's issues, check network requests (time they take, payload sizes, headers used) and also look at performance charts of your code.

The solutions typically fall under three categories:

Swipe →

- 1 Reduce the amount of bytes sent from a server
- 2 Download the right resources at the right time
- 3 Reduce expensive / long operations

Some ways to improve website speed:

- Optimize images
- Load only the content necessary
- Minimize redirects
- Minimize time to first bite
- Minimize slow operations

- Compress your static files and minify code
- Cache static files correctly in the browser
- Use a CDN to cache static files

- Progressive rendering
- Reduce API payload size
- Use SSR or SSG

Do you find it helpful?
